

FeedPro-G™

SILAGE COVERS 

LARGE COVERS SIZES? NO PROBLEM!
EXTRA WIDE • EXTRA LONG

"Provides almost twice the tear resistance of the leading cover!"

FeedPro-G™ Silage Covers consist of U.V. stabilized white/black tri-layer polyethylene. The white top-layer provides excellent protection from ultraviolet rays and reflects sunlight to minimize heat build-up and help prevent spoilage. The reverse side consists of a black opaque layer of puncture resistant polyethylene to prevent light transmission from reaching the pile. Readily available in all the extra large hard-to-find sizes.

SILAGE COVER INTEGRITY

Cover integrity is an extremely important part of preventing spoilage by keeping moisture and air from reaching your pile. See the illustration on the right to learn what FeedPro-G™ can do for you by providing a high level of protection.

The FeedPro-G™ silage cover is constructed with premium resins in the outer layers and the addition of recycled polyethylene in the core. Providing a green solution for our customers without sacrificing film performance. Raven is dedicated to sustainability initiatives company-wide and has invested in numerous projects to demonstrate our commitment to the environment.

WHAT'S DIFFERENT WITH FEEDPRO-G™

Virgin Grade Outer Layer Resins = Stable Outdoor Exposure

Recycled Core Resins = Economical Green Alternative

Tri-layer Construction = Excellent Tear & Puncture Strengths

COMPARE COVER SIZES?

FEEDPRO-G™ A5WB1

QUESTIONS?

FEEDPRO-G™ VS. STANDARD 6 MIL

- Is your cover strong enough to hold up to the elements? (*Wind, Rain, Sun, Snow, etc.*)
- Can you get the size required to cover your bunker from your current supplier?
- Do you have the time and labor to waste removing & installing damaged covers?
- Do you get a full season with your current cover?
